Trend Teaser

THE AGENTIC WEB 2026

REPLY
TD

TD Reply

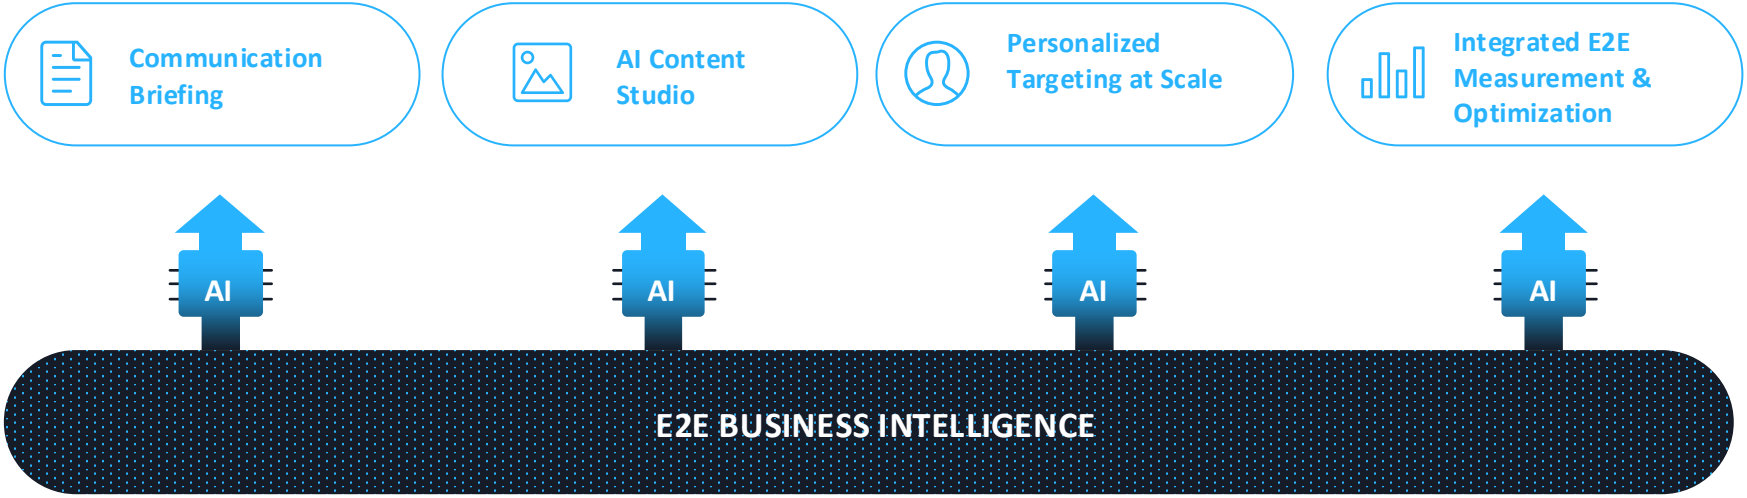
Your next competitor is an AI-Agent that discovers the “best option for the user” and buys it —

often without even acknowledging your brand.

Marketing designed only for humans fails in this AI-driven reality.

REPLY TD Mission

Disrupting the Marketing Value Chain via AI



Digital experience is bifurcating:
Humans provide intent, AI executes decisions.

Outdated

- Human-led journeys focused on navigation, exploration, and persuasion

Current

- AI-led execution through agent-ready systems (intent, policies, guardrails)
- Humans provide oversight and control

Brands must now influence both the buyer and the decision-making system.

CONFIDENTIAL

Competitive advantage lies in embracing Agent-2-Agent communication across experience, content and data.

The Agentic Web 2026 Overview

OMNIMODAL EXPERIENCES

INTERFACE

Towards AI-powered, permission-driven interactions where agents act on user intent with continuous, cross-channel context across multiple modalities.

AI-CONTENT SUPPLY CHAIN

FOUNDATION

Towards autonomous, policy-driven content and UI systems that self-optimize in real time through continuous learning loops.

DATA, GROWTH & GOVERNANCE

ENGINE

Toward trusted, governed agentic systems that enable real-time decisioning, reusable agent products, and data-driven growth.

Omnimodal Experiences: Optimization shifts from Channels to Omni-Presence

Agentic Web & GEO (Generative Engine Optimization)

By 2028, **brands' organic search traffic will decrease by +50%** as consumers embrace Gen-AI search.[1]

AI influenced 20% of Cyber Week orders, generating $67 billion in global holiday sales.[2]

AI agent influenced-shoppers were **38% more likely to make a purchase**.[2]

Omnimodal Interactions with Context Continuity

Multimodal AI market: $1.73B (2024) to $10.89B (2030), **CAGR 36.8%.**[3]

Enterprises that **orchestrate AI-powered customer journeys** across channels achieve **conversion rates up to 30% higher** than those using fragmented, channel-specific approaches.[4]

2026 is the transition year for enterprises to establish an autonomous-agent-ready experience economy

Start optimizing for AI decisions. Stop looking for clicks.

- ✓ Operationalize GEO (Generative Engine Optimization). Revamp your KPI accordingly.
- ✓ Structure content so LLMs can trust it, cite it, and act on it.

Activate your content as a real-time distribution engine.

- ✓ Move from manual content/page production to semi-autonomous content generation & assembly.
- ✓ Run closed-loop campaigns that generate → launch → learn → self-optimize

Define "policy before automation."

- ✓ Define what agents can do - spend limits, approvals, data access, compliance guardrails.
- ✓ Update analytics with self service insights solutions
- ✓ Use governance and observability so autonomy is auditable, not chaotic.
